Pragmatism is a philosophical tradition¹⁹⁷ that considers words and thought as tools¹⁹⁸ and instruments for prediction¹⁹⁹, problem solving²⁰⁰, and action²⁰¹, and rejects the idea that the function of thought is to describe, represent, or mirror reality. Pragmatists contend that most philosophical topics—such as the nature of knowledge, language, concepts, meaning, belief, and science—are all best viewed in terms of their practical uses and successes.

Pragmatism began in the United States in the 1870s. Its origins are often attributed to the philosophers Charles Sanders Peirce²⁰², William James²⁰³, and John Dewey²⁰⁴. In 1878, Peirce described it in his pragmatic maxim²⁰⁵: "Consider the practical effects of the objects of your conception. Then, your conception of those effects is the whole of your conception of the object."^[1]

1.1 Origins

Figure 3 Charles Peirce: the American polymath who first identified pragmatism

Pragmatism as a philosophical movement began in the United States around 1870.^[2] Charles Sanders Peirce²⁰⁶ (and his pragmatic maxim) is given credit for its development,^[3] along with later 20th-century contributors, William James²⁰⁷ and John Dewey²⁰⁸.^[4] Its direction

²⁰⁶ https://en.wikipedia.org/wiki/Charles_Sanders_Peirce

²⁰⁷ https://en.wikipedia.org/wiki/William_James

²⁰⁸ https://en.wikipedia.org/wiki/John_Dewey

was determined by The Metaphysical Club²⁰⁹ members Charles Sanders Peirce, William James, and Chauncey Wright²¹⁰ as well as John Dewey and George Herbert Mead²¹¹.

The first use in print of the name *pragmatism* was in 1898 by James, who credited Peirce with coining the term²¹² during the early 1870s.^[5] James regarded Peirce's "Illustrations of the Logic of Science" series (including "The Fixation of Belief"²¹³ (1877), and especially "How to Make Our Ideas Clear"²¹⁴ (1878)) as the foundation of pragmatism.^{[6][7]} Peirce in turn wrote in 1906^[8] that Nicholas St. John Green²¹⁵ had been instrumental by emphasizing the importance of applying Alexander Bain²¹⁶'s definition of belief, which was "that upon which a man is prepared to act". Peirce wrote that "from this definition, pragmatism is scarce more than a corollary; so that I am disposed to think of him as the grandfather of pragmatism". John Shook has said, "Chauncey Wright also deserves considerable credit, for as both Peirce and James recall, it was Wright who demanded a phenomenalist²¹⁷ and fallibilist²¹⁸ empiricism²¹⁹ as an alternative to rationalistic speculation."^[9]

Peirce developed the idea that inquiry depends on real doubt, not mere verbal or hyperbolic doubt²²⁰,^[10] and said that, in order to understand a conception in a fruitful way, "Consider the practical effects of the objects of your conception. Then, your conception of those effects is the whole of your conception of the object",^[1] which he later called the pragmatic maxim²²¹. It equates any conception of an object to the general extent of the conceivable implications for informed practice of that object's effects. This is the heart of his pragmatism as a method of experimental mental reflection arriving at conceptions in terms of conceivable confirmatory and disconfirmatory circumstances—a method hospitable to the generation of explanatory hypotheses, and conducive to the employment and improvement of verification. Typical of Peirce is his concern with inference to explanatory hypotheses as outside the usual foundational alternative between deductivist rationalism and inductivist empiricism, although he was a mathematical logician²²² and a founder of statistics²²³.

Peirce lectured and further wrote on pragmatism to make clear his own interpretation. While framing a conception's meaning in terms of conceivable tests, Peirce emphasized that, since a conception is general, its meaning, its intellectual purport, equates to its acceptance's implications for general practice, rather than to any definite set of real effects (or test results); a conception's clarified meaning points toward its conceivable verifications, but the outcomes are not meanings, but individual upshots. Peirce in 1905 coined the new name pragmaticism²²⁴ "for the precise purpose of expressing the original definition",

[11] saying that "all went happily" with James's and F. C. S. Schiller²²⁵'s variant uses of the old name "pragmatism" and that he nonetheless coined the new name because of the old name's growing use in "literary journals, where it gets abused". Yet in a 1906 manuscript, he cited as causes his differences with James and Schiller.^[12] and, in a 1908 publication,^[13] his differences with James as well as literary author Giovanni Papini²²⁶. Peirce in any case regarded his views that truth is immutable and infinity is real, as being opposed by the other pragmatists, but he remained allied with them on other issues.^[13]

Pragmatism enjoyed renewed attention after Willard Van Orman Quine²²⁷ and Wilfrid Sellars²²⁸ used a revised pragmatism to criticize logical positivism²²⁹ in the 1960s. Inspired by the work of Quine and Sellars, a brand of pragmatism known sometimes as neopragmatism²³⁰ gained influence through Richard Rorty²³¹, the most influential of the late 20th century pragmatists along with Hilary Putnam²³² and Robert Brandom²³³. Contemporary pragmatism may be broadly divided into a strict analytic tradition²³⁴ and a "neo-classical" pragmatism (such as Susan Haack²³⁵) that adheres to the work of Peirce, James, and Dewey.

1.2 Core tenets

A few of the various but often interrelated positions characteristic of philosophers working from a pragmatist approach include:

- Epistemology²³⁶ (justification): a coherentist²³⁷ theory of justification that rejects the claim that all knowledge and justified belief rest ultimately on a foundation of noninferential knowledge or justified belief. Coherentists hold that justification is solely a function of some relationship between beliefs, none of which are privileged beliefs in the way maintained by foundationalist²³⁸ theories of justification.
- Epistemology²³⁹ (truth): a deflationary²⁴⁰ or pragmatic²⁴¹ theory of truth; the former is the epistemological claim that assertions that predicate truth of a statement do not attribute a property called truth to such a statement while the latter is the epistemological claim that assertions that predicate truth of a statement attribute the property of useful-to-believe to such a statement.

²⁴⁰ https://en.wikipedia.org/wiki/Deflationary_theory_of_truth

²⁴¹ https://en.wikipedia.org/wiki/Pragmatic_theory_of_truth

- Metaphysics²⁴²: a pluralist²⁴³ view that there is more than one sound way to conceptualize the world and its content.
- Philosophy of science²⁴⁴: an instrumentalist²⁴⁵ and scientific anti-realist²⁴⁶ view that a scientific concept or theory should be evaluated by how effectively it explains and predicts phenomena, as opposed to how accurately it describes objective reality.
- Philosophy of language²⁴⁷: an anti-representationalist²⁴⁸ view that rejects analyzing the semantic meaning²⁴⁹ of propositions, mental states, and statements in terms of a correspondence or representational relationship and instead analyzes semantic meaning in terms of notions like dispositions to action, inferential relationships, and/or functional roles (e.g. behaviorism²⁵⁰ and inferentialism²⁵¹). Not to be confused with pragmatics²⁵², a sub-field of linguistics²⁵³ with no relation to philosophical pragmatism.
- Additionally, forms of empiricism²⁵⁴, fallibilism²⁵⁵, verificationism²⁵⁶, and a Quinean naturalist²⁵⁷ metaphilosophy are all commonly elements of pragmatist philosophies. Many pragmatists are epistemological relativists²⁵⁸ and see this to be an important facet of their pragmatism (e.g. Joseph Margolis²⁵⁹), but this is controversial and other pragmatists argue such relativism to be seriously misguided (e.g. Hilary Putnam²⁶⁰, Susan Haack²⁶¹).

1.2.1 Anti-reification of concepts and theories

Dewey in *The Quest for Certainty* criticized what he called "the philosophical fallacy": Philosophers often take categories (such as the mental and the physical) for granted because they don't realize that these are nominal²⁶² concepts that were invented to help solve specific problems.^[14] This causes metaphysical and conceptual confusion. Various examples are the "ultimate Being²⁶³" of Hegelian²⁶⁴ philosophers, the belief in a "realm of value²⁶⁵", the idea that logic, because it is an abstraction from concrete thought, has nothing to do with the action of concrete thinking.

264 <https://en.wikipedia.org/wiki/Hegelian>

265 https://en.wikipedia.org/wiki/Absolute_intrinsic_value_denial

David L. Hildebrand summarized the problem: "Perceptual inattention to the specific functions comprising inquiry led realists and idealists alike to formulate accounts of knowledge that project the products of extensive abstraction back onto experience."^{[14]:40}

1.2.2 Naturalism and anti-Cartesianism

From the outset, pragmatists wanted to reform philosophy and bring it more in line with the scientific method as they understood it. They argued that idealist and realist philosophy had a tendency to present human knowledge as something beyond what science could grasp. They held that these philosophies then resorted either to a phenomenology inspired by Kant or to correspondence theories of knowledge and truth²⁶⁶.^[citation needed²⁶⁷] Pragmatists criticized the former for its a priorism²⁶⁸, and the latter because it takes correspondence²⁶⁹ as an unanalyzable fact. Pragmatism instead tries to explain the relation between knower and known.

In 1868,^[15] C.S. Peirce argued that there is no power of intuition in the sense of a cognition unconditioned by inference, and no power of introspection, intuitive or otherwise, and that awareness of an internal world is by hypothetical inference from external facts. Introspection and intuition were staple philosophical tools at least since Descartes. He argued that there is no absolutely first cognition in a cognitive process; such a process has its beginning but can always be analyzed into finer cognitive stages. That which we call introspection does not give privileged access to knowledge about the mind—the self is a concept that is derived from our interaction with the external world and not the other way around.^[16] At the same time he held persistently that pragmatism and epistemology in general could not be derived from principles of psychology understood as a special science:^[17] what we do think is too different from what we should think; in his "Illustrations of the Logic of Science"²⁷⁰ series, Peirce formulated both pragmatism and principles of statistics as aspects of scientific method in general.^[18] This is an important point of disagreement with most other pragmatists, who advocate a more thorough naturalism and psychologism.

Richard Rorty expanded on these and other arguments in *Philosophy and the Mirror of Nature*²⁷¹ in which he criticized attempts by many philosophers of science to carve out a space for epistemology that is entirely unrelated to—and sometimes thought of as superior to—the empirical sciences. W.V. Quine, instrumental in bringing naturalized epistemology²⁷² back into favor with his essay "Epistemology Naturalized",^[19] also criticized "traditional" epistemology and its "Cartesian dream" of absolute certainty. The dream, he argued, was impossible in practice as well as misguided in theory, because it separates epistemology from scientific inquiry.

Figure 4 Hilary Putnam asserts that the combination of antiskepticism and fallibilism is a central feature of pragmatism.

1.2.3 Reconciliation of anti-skepticism and fallibilism

Hilary Putnam²⁷³ has suggested that the reconciliation of anti-skepticism^[20] and fallibilism²⁷⁴ is the central goal of American pragmatism.^[citation needed²⁷⁵] Although all human knowledge is partial, with no ability to take a "God's-eye-view", this does not necessitate a glob-

²⁷³ https://en.wikipedia.org/wiki/Hilary_Putnam

²⁷⁴ <https://en.wikipedia.org/wiki/Fallibilism>

alized skeptical attitude, a radical philosophical skepticism²⁷⁶ (as distinguished from that which is called scientific skepticism²⁷⁷). Peirce insisted that (1) in reasoning, there is the presupposition, and at least the hope,^[21] that truth and the real are discoverable and would be discovered, sooner or later but still inevitably, by investigation taken far enough,^[1] and (2) contrary to Descartes' famous and influential methodology in the *Meditations on First Philosophy*²⁷⁸, doubt cannot be feigned or created by verbal fiat to motivate fruitful inquiry, and much less can philosophy begin in universal doubt.^[22] Doubt, like belief, requires justification. Genuine doubt irritates and inhibits, in the sense that belief is that upon which one is prepared to act.^[1] It arises from confrontation with some specific recalcitrant matter of fact (which Dewey called a "situation"), which unsettles our belief in some specific proposition. Inquiry is then the rationally self-controlled process of attempting to return to a settled state of belief about the matter. Note that anti-skepticism is a reaction to modern academic skepticism in the wake of Descartes. The pragmatist insistence that all knowledge is tentative is quite congenial to the older skeptical tradition.

1.2.4 Theory of truth and epistemology

Main article: Pragmatic theory of truth²⁷⁹ Pragmatism was not the first to apply evolution to theories of knowledge: Schopenhauer²⁸⁰ advocated a biological idealism as what's useful to an organism to believe might differ wildly from what is true. Here knowledge and action are portrayed as two separate spheres with an absolute or transcendental²⁸¹ truth above and beyond any sort of inquiry organisms used to cope with life. Pragmatism challenges this idealism by providing an "ecological" account of knowledge: inquiry is how organisms can get a grip on their environment. *Real* and *true* are functional labels in inquiry and cannot be understood outside of this context. It is not *realist* in a traditionally robust sense of realism (what Hilary Putnam²⁸² later called metaphysical realism²⁸³), but it is *realist*²⁸⁴ in how it acknowledges an external world which must be dealt with.^[citation needed²⁸⁵]

Many of James' best-turned phrases—"truth's cash value"^[23] and "the true is only the expedient in our way of thinking"^[24]—were taken out of context and caricatured in contemporary literature as representing the view where any idea with practical utility is true. William James wrote:

It is high time to urge the use of a little imagination in philosophy. The unwillingness of some of our critics to read any but the silliest of possible meanings into our statements is as discreditable to their imaginations as anything I know in recent philosophic history. Schiller says the truth is that which "works." Thereupon he is treated as one who limits verification to the lowest material utilities. Dewey says truth is what gives "satisfaction"! He is treated as one who believes in calling everything true which, if it were true, would be pleasant.^[25]

²⁸² https://en.wikipedia.org/wiki/Hilary_Putnam

²⁸³ https://en.wikipedia.org/wiki/Metaphysical_realism

²⁸⁴ https://en.wikipedia.org/wiki/Philosophical_realism

In reality, James asserts, the theory is a great deal more subtle.^[nb 1]

The role of belief in representing reality is widely debated in pragmatism. Is a belief valid when it represents reality? "Copying is one (and only one) genuine mode of knowing".^[26] Are beliefs dispositions which qualify as true or false depending on how helpful they prove in inquiry and in action? Is it only in the struggle of intelligent organisms with the surrounding environment that beliefs acquire meaning? Does a belief only become true when it succeeds in this struggle? In James's pragmatism nothing practical or useful is held to be necessarily true²⁸⁶ nor is anything which helps to survive merely in the short term. For example, to believe my cheating spouse is faithful may help me feel better now, but it is certainly not useful from a more long-term perspective because it doesn't accord with the facts (and is therefore not true).

1.3 In other fields

While pragmatism started simply as a criterion of meaning, it quickly expanded to become a full-fledged epistemology with wide-ranging implications for the entire philosophical field. Pragmatists who work in these fields share a common inspiration, but their work is diverse and there are no received views.

1.3.1 Philosophy of science

In the philosophy of science, instrumentalism²⁸⁷ is the view that concepts and theories are merely useful instruments and progress in science cannot be couched in terms of concepts and theories somehow mirroring reality. Instrumentalist philosophers often define scientific progress as nothing more than an improvement in explaining and predicting phenomena. Instrumentalism does not state that truth does not matter, but rather provides a specific answer to the question of what truth and falsity mean and how they function in science.

One of C. I. Lewis²⁸⁸ main arguments in *Mind and the World Order: Outline of a Theory of Knowledge* (1929) was that science does not merely provide a copy of reality but must work with conceptual systems and that those are chosen for pragmatic reasons, that is, because they aid inquiry. Lewis' own development of multiple modal logics²⁸⁹ is a case in point. Lewis is sometimes called a proponent of **conceptual pragmatism** because of this.^[27]

Another development is the cooperation of logical positivism²⁹⁰ and pragmatism in the works of Charles W. Morris²⁹¹ and Rudolf Carnap²⁹². The influence of pragmatism on these writers is mostly limited to the incorporation of the pragmatic maxim²⁹³ into their

²⁹³ https://en.wikipedia.org/wiki/Pragmatic_maxim

epistemology. Pragmatists with a broader conception of the movement do not often refer to them.

W. V. Quine²⁹⁴'s paper "Two Dogmas of Empiricism"²⁹⁵, published in 1951, is one of the more celebrated papers of 20th-century philosophy in the analytic tradition. The paper is an attack on two central tenets of the logical positivists' philosophy. One is the distinction between analytic statements (tautologies and contradictions) whose truth (or falsehood) is a function of the meanings of the words in the statement ('all bachelors are unmarried'), and synthetic statements, whose truth (or falsehood) is a function of (contingent) states of affairs. The other is reductionism, the theory that each meaningful statement gets its meaning from some logical construction of terms which refers exclusively to immediate experience. Quine's argument brings to mind Peirce's insistence that axioms are not a priori truths but synthetic statements.

1.3.2 Logic

Later in his life Schiller became famous for his attacks on logic in his textbook, *Formal Logic*. By then, Schiller's pragmatism had become the nearest of any of the classical pragmatists to an ordinary language philosophy²⁹⁶. Schiller sought to undermine the very possibility of formal logic, by showing that words only had meaning when used in context. The least famous of Schiller's main works was the constructive sequel to his destructive book *Formal Logic*. In this sequel, *Logic for Use*, Schiller attempted to construct a new logic to replace the formal logic that he had criticized in *Formal Logic*. What he offers is something philosophers would recognize today as a logic covering the context of discovery and the hypothetico-deductive method.

Whereas Schiller dismissed the possibility of formal logic, most pragmatists are critical rather of its pretension to ultimate validity and see logic as one logical tool among others—or perhaps, considering the multitude of formal logics, one set of tools among others. This is the view of C. I. Lewis. C. S. Peirce developed multiple methods for doing formal logic.

Stephen Toulmin²⁹⁷'s *The Uses of Argument* inspired scholars in informal logic and rhetoric studies (although it is an epistemological work).

1.3.3 Metaphysics

James and Dewey were empirical²⁹⁸ thinkers in the most straightforward fashion: experience is the ultimate test and experience is what needs to be explained. They were dissatisfied with ordinary empiricism because, in the tradition dating from Hume, empiricists had a tendency to think of experience as nothing more than individual sensations. To the pragmatists, this went against the spirit of empiricism: we should try to explain all that is given in experience including connections and meaning, instead of explaining them away and positing sense data as the ultimate reality. Radical empiricism²⁹⁹, or Immediate Empiricism in Dewey's words,

²⁹⁴ https://en.wikipedia.org/wiki/W._V._Quine

²⁹⁶ https://en.wikipedia.org/wiki/Ordinary_language_philosophy

²⁹⁷ https://en.wikipedia.org/wiki/Stephen_Toulmin

²⁹⁸ <https://en.wikipedia.org/wiki/Empiricism>

²⁹⁹ https://en.wikipedia.org/wiki/Radical_empiricism

wants to give a place to meaning and value instead of explaining them away as subjective additions to a world of whizzing atoms.

Figure 5 The "Chicago Club" including Mead, Dewey, Angell, and Moore. Pragmatism is sometimes called American pragmatism because so many of its proponents were and are Americans.

William James gives an interesting example of this philosophical shortcoming:

[A young graduate] began by saying that he had always taken for granted that when you entered a philosophic classroom you had to open relations with a universe entirely distinct from the one you left behind you in the street. The two were supposed, he said, to have so little to do with each other, that you could not possibly occupy your mind with them at the same time. The world of concrete personal experiences to which the street belongs is multitudinous beyond imagination, tangled, muddy, painful and perplexed. The world to which your philosophy-professor introduces you is simple, clean and noble. The contradictions of real life are absent from it. ... In point of fact it is far less an account of this actual world than a clear addition built upon it ... It is no explanation of our concrete universe^[28]

F. C. S. Schiller³⁰⁰'s first book *Riddles of the Sphinx* was published before he became aware of the growing pragmatist movement taking place in America. In it, Schiller argues for a middle ground between materialism and absolute metaphysics. These opposites are comparable to what William James called tough-minded empiricism and tender-minded rationalism. Schiller contends on the one hand that mechanistic naturalism cannot make sense of the "higher" aspects of our world. These include free will, consciousness, purpose, universals and some would add God. On the other hand, abstract metaphysics cannot make sense of the "lower" aspects of our world (e.g. the imperfect, change, physicality). While Schiller is vague about the exact sort of middle ground he is trying to establish, he suggests that metaphysics is a tool that can aid inquiry, but that it is valuable only insofar as it does help in explanation.

In the second half of the 20th century, Stephen Toulmin³⁰¹ argued that the need to distinguish between reality and appearance only arises within an explanatory scheme and therefore that there is no point in asking what "ultimate reality" consists of. More recently, a similar idea has been suggested by the postanalytic philosopher³⁰² Daniel Dennett³⁰³, who argues that anyone who wants to understand the world has to acknowledge both the "syntactical" aspects of reality (i.e., whizzing atoms) and its emergent or "semantic" properties (i.e., meaning and value).^[citation needed³⁰⁴]

Radical empiricism gives answers to questions about the limits of science, the nature of meaning and value and the workability of reductionism³⁰⁵. These questions feature prominently in current debates about the relationship between religion and science³⁰⁶, where it is often assumed—most pragmatists would disagree—that science degrades everything that is meaningful into "merely" physical phenomena³⁰⁷.

1.3.4 Philosophy of mind

Both John Dewey³⁰⁸ in *Experience and Nature* (1929) and, half a century later, Richard Rorty³⁰⁹ in his *Philosophy and the Mirror of Nature* (1979) argued that much of the debate about the relation of the mind to the body results from conceptual confusions. They argue instead that there is no need to posit the mind or mindstuff as an ontological³¹⁰ category.

Pragmatists disagree over whether philosophers ought to adopt a quietist or a naturalist stance toward the mind-body problem. The former, including Rorty, want to do away with the problem because they believe it's a pseudo-problem, whereas the latter believe that it is a meaningful empirical question.^[citation needed³¹¹]

1.3.5 Ethics

Main article: Pragmatic ethics³¹² Pragmatism sees no fundamental difference between practical and theoretical reason, nor any ontological difference between facts and values. Pragmatist ethics is broadly humanist³¹³ because it sees no ultimate test of morality beyond what matters for us as humans. Good values are those for which we have good reasons, viz. the good reasons approach³¹⁴. The pragmatist formulation pre-dates those of other philosophers who have stressed important similarities between values and facts such as Jerome Schneewind³¹⁵ and John Searle³¹⁶.

314 https://en.wikipedia.org/wiki/Good_reasons_approach

315 https://en.wikipedia.org/wiki/Jerome_Schneewind

316 https://en.wikipedia.org/wiki/John_Searle

Figure 6 William James tried to show the meaningfulness of (some kinds of) spirituality but, like other pragmatists, did not see religion as the basis of meaning or morality.

William James' contribution to ethics, as laid out in his essay *The Will to Believe* has often been misunderstood as a plea for relativism or irrationality. On its own terms it argues that ethics always involves a certain degree of trust or faith and that we cannot always wait for adequate proof when making moral decisions.

Moral questions immediately present themselves as questions whose solution cannot wait for sensible proof. A moral question is a question not of what sensibly exists, but of what is good, or would be good if it did exist. ... A social organism of any sort whatever, large or small, is what it is because each member proceeds to his own duty with a trust

that the other members will simultaneously do theirs. Wherever a desired result is achieved by the co-operation of many independent persons, its existence as a fact is a pure consequence of the precursive faith in one another of those immediately concerned. A government, an army, a commercial system, a ship, a college, an athletic team, all exist on this condition, without which not only is nothing achieved, but nothing is even attempted.^[29]

Of the classical pragmatists, John Dewey wrote most extensively about morality and democracy.^[30] In his classic article "Three Independent Factors in Morals",^[31] he tried to integrate three basic philosophical perspectives on morality: the right, the virtuous and the good. He held that while all three provide meaningful ways to think about moral questions, the possibility of conflict among the three elements cannot always be easily solved.^[32]

Dewey also criticized the dichotomy between means and ends which he saw as responsible for the degradation of our everyday working lives and education, both conceived as merely a means to an end. He stressed the need for meaningful labor and a conception of education that viewed it not as a preparation for life but as life itself.^[33]

Dewey was opposed to other ethical philosophies of his time, notably the emotivism³¹⁷ of Alfred Ayer³¹⁸. Dewey envisioned the possibility of ethics as an experimental discipline, and thought values could best be characterized not as feelings or imperatives, but as hypotheses about what actions will lead to satisfactory results or what he termed *consummatory experience*. An additional implication of this view is that ethics is a fallible undertaking because human beings are frequently unable to know what would satisfy them.

During the late 1900s and first decade of 2000, pragmatism was embraced by many in the field of bioethics³¹⁹ led by the philosophers John Lachs³²⁰ and his student Glenn McGee³²¹, whose 1997 book *The Perfect Baby: A Pragmatic Approach to Genetic Engineering* (see designer baby³²²) garnered praise from within classical American philosophy³²³ and criticism from bioethics for its development of a theory of pragmatic bioethics and its rejection of the principlism theory then in vogue in medical ethics³²⁴. An anthology published by the MIT Press³²⁵ titled *Pragmatic Bioethics* included the responses of philosophers to that debate, including Micah Hester, Griffin Trotter and others many of whom developed their own theories based on the work of Dewey, Peirce, Royce and others. Lachs developed several applications of pragmatism to bioethics independent of but extending from the work of Dewey and James.

A recent pragmatist contribution to meta-ethics³²⁶ is Todd Lekan's *Making Morality*.^[34] Lekan argues that morality is a fallible but rational practice and that it has traditionally been misconceived as based on theory or principles. Instead, he argues, theory and rules arise as tools to make practice more intelligent.

1.3.6 Aesthetics

John Dewey's *Art as Experience*, based on the William James lectures he delivered at Harvard University, was an attempt to show the integrity of art, culture and everyday experience (*IEP*). Art, for Dewey, is or should be a part of everyone's creative lives and not just the privilege of a select group of artists. He also emphasizes that the audience is more than a passive recipient. Dewey's treatment of art was a move away from the transcendental³²⁷ approach to aesthetics³²⁸ in the wake of Immanuel Kant³²⁹ who emphasized the unique character of art and the disinterested nature of aesthetic appreciation. A notable contemporary pragmatist aesthetician is Joseph Margolis³³⁰. He defines a work of art as "a physically embodied, culturally emergent entity", a human "utterance" that isn't an ontological quirk but in line with other human activity and culture in general. He emphasizes that works of art are complex and difficult to fathom, and that no determinate interpretation can be given.

1.3.7 Philosophy of religion

Both Dewey and James investigated the role that religion can still play in contemporary society, the former in *A Common Faith* and the latter in *The Varieties of Religious Experience*.

From a general point of view, for William James, something is true only insofar as it works. Thus, the statement, for example, that prayer is heard may work on a psychological level but (a) may not help to bring about the things you pray for (b) may be better explained by referring to its soothing effect than by claiming prayers are heard. As such, pragmatism is not antithetical to religion but it is not an apologetic for faith either. James' metaphysical position however, leaves open the possibility that the ontological claims of religions may be true. As he observed in the end of the *Varieties*, his position does not amount to a denial of the existence of transcendent realities³³¹. Quite the contrary, he argued for the legitimate epistemic right to believe in such realities, since such beliefs do make a difference in an individual's life and refer to claims that cannot be verified or falsified either on intellectual or common sensorial grounds.

Joseph Margolis³³² in *Historied Thought, Constructed World* (California, 1995) makes a distinction between "existence" and "reality". He suggests using the term "exists" only for those things which adequately exhibit Peirce's *Secondness*: things which offer brute physical resistance to our movements. In this way, such things which affect us, like numbers, may be said to be "real", although they do not "exist". Margolis suggests that God, in such a linguistic usage, might very well be "real", causing believers to act in such and such a way, but might not "exist".

1.4 Neopragmatism

Main article: Neopragmatism³³³ Neopragmatism³³⁴ is a broad contemporary category used for various thinkers that incorporate important insights of, and yet significantly diverge from, the classical pragmatists. This divergence may occur either in their philosophical methodology (many of them are loyal to the analytic tradition) or in conceptual formation: for example, conceptual pragmatist C. I. Lewis³³⁵ was very critical of Dewey; neopragmatist³³⁶ Richard Rorty³³⁷ disliked Peirce.

Important analytic pragmatists³³⁸ include early Richard Rorty³³⁹ (who was the first to develop neopragmatist philosophy in his *Philosophy and the Mirror of Nature*³⁴⁰ (1979),^[35] Hilary Putnam³⁴¹, W. V. O. Quine³⁴², and Donald Davidson³⁴³. Brazilian social thinker Roberto Unger³⁴⁴ advocates for a **radical pragmatism**, one that "de-naturalizes" society and culture, and thus insists that we can "transform the character of our relation to social and cultural worlds we inhabit rather than just to change, little by little, the content of the arrangements and beliefs that comprise them".^[36] Late Rorty and Jürgen Habermas³⁴⁵ are closer to Continental thought³⁴⁶.

Neopragmatist thinkers who are more loyal to classical pragmatism include Sidney Hook³⁴⁷ and Susan Haack³⁴⁸ (known for the theory of foundherentism³⁴⁹). Many pragmatist ideas (especially those of Peirce) find a natural expression in the decision-theoretic reconstruction of epistemology pursued in the work of Isaac Levi³⁵⁰. Nicholas Rescher³⁵¹ advocates his version of **methodological pragmatism**, based on construing pragmatic efficacy not as a replacement for truths but as a means to its evidentiality.^[37] Rescher is also a proponent of pragmatic idealism³⁵².

Not all pragmatists are easily characterized. With the advent of postanalytic philosophy³⁵³ and the diversification of Anglo-American philosophy, many philosophers were influenced by pragmatist thought without necessarily publicly committing themselves to that philosophical school. Daniel Dennett³⁵⁴, a student of Quine's, falls into this category, as does Stephen

Toulmin³⁵⁵, who arrived at his philosophical position via Wittgenstein³⁵⁶, whom he calls "a pragmatist of a sophisticated kind".^[38] Another example is Mark Johnson³⁵⁷ whose embodied philosophy³⁵⁸^[39] shares its psychologism, direct realism and anti-cartesianism with pragmatism. Conceptual pragmatism is a theory of knowledge originating with the work of the philosopher and logician Clarence Irving Lewis³⁵⁹. The epistemology of conceptual pragmatism was first formulated in the 1929 book *Mind and the World Order: Outline of a Theory of Knowledge*.

French pragmatism is attended with theorists such as Bruno Latour³⁶⁰, Michel Crozier³⁶¹, Luc Boltanski³⁶², and Laurent Thévenot³⁶³. It often is seen as opposed to structural problems connected to the French critical theory³⁶⁴ of Pierre Bourdieu³⁶⁵. French pragmatism has more recently made inroads into American sociology as well.^{[40][41][42]}

Philosophers John R. Shook and Tibor Solymosi said that "each new generation rediscovers and reinvents its own versions of pragmatism by applying the best available practical and scientific methods to philosophical problems of contemporary concern".^[43]

1.5 Legacy and contemporary relevance

In the 20th century, the movements of logical positivism³⁶⁶ and ordinary language philosophy³⁶⁷ have similarities with pragmatism. Like pragmatism, logical positivism provides a verification criterion of meaning that is supposed to rid us of nonsense metaphysics; however, logical positivism doesn't stress action as pragmatism does. The pragmatists rarely used their maxim of meaning to rule out all metaphysics as nonsense. Usually, pragmatism was put forth to correct metaphysical doctrines or to construct empirically verifiable ones rather than to provide a wholesale rejection.

Ordinary language philosophy is closer to pragmatism than other philosophy of language³⁶⁸ because of its nominalist³⁶⁹ character (although Peirce's pragmatism is not nominalist^[13]) and because it takes the broader functioning of language in an environment as its focus instead of investigating abstract relations between language and world.

Pragmatism has ties to process philosophy³⁷⁰. Much of the classical pragmatists' work developed in dialogue with process philosophers such as Henri Bergson³⁷¹ and Alfred North

Whitehead³⁷², who aren't usually considered pragmatists because they differ so much on other points.^[44]

Behaviorism³⁷³ and functionalism³⁷⁴ in psychology and sociology also have ties to pragmatism, which is not surprising considering that James and Dewey were both scholars of psychology and that Mead³⁷⁵ became a sociologist.

Pragmatism emphasizes the connection between thought and action. Applied fields like public administration³⁷⁶,^[45] political science³⁷⁷,^[46] leadership studies,^[47] international relations³⁷⁸,^[48] conflict resolution,^[49] and research methodology^[50] have incorporated the tenets of pragmatism in their field. Often this connection is made using Dewey and Addams's expansive notion of democracy.

1.5.1 Effects on social sciences

In the early 20th century, Symbolic interactionism³⁷⁹, a major perspective within sociological social psychology, was derived from pragmatism, especially the work of George Herbert Mead³⁸⁰ and Charles Cooley³⁸¹, as well as that of Peirce³⁸² and William James³⁸³.^[51]

Increasing attention is being given to pragmatist epistemology in other branches of the social sciences, which have struggled with divisive debates over the status of social scientific knowledge.^{[4][52]}

Enthusiasts suggest that pragmatism offers an approach that is both pluralist and practical.^[53]

1.5.2 Effects on public administration

The classical pragmatism of John Dewey³⁸⁴, William James³⁸⁵, and Charles Sanders Peirce³⁸⁶ has influenced research in the field of public administration. Scholars claim classical pragmatism had a profound influence on the origin of the field of public administration.^{[54][55]} At the most basic level, public administrators are responsible for making programs "work" in a pluralistic, problems-oriented environment. Public administrators are also responsible for the day-to-day work with citizens. Dewey's participatory democracy³⁸⁷ can

387 https://en.wikipedia.org/wiki/Participatory_democracy

be applied in this environment. Dewey and James' notion of theory as a tool, helps administrators craft theories to resolve policy and administrative problems. Further, the birth of American public administration³⁸⁸ coincides closely with the period of greatest influence of the classical pragmatists.

Which pragmatism (classical pragmatism or neo-pragmatism) makes the most sense in public administration has been the source of debate. The debate began when Patricia M. Shields³⁸⁹ introduced Dewey's notion of the Community of Inquiry.^[56] Hugh Miller objected to one element of the community of inquiry (problematic situation, scientific attitude, participatory democracy): scientific attitude.^[57] A debate that included responses from a practitioner,^[58] an economist,^[59] a planner,^[60] other public administration scholars,^{[61][62]} and noted philosophers^{[63][64]} followed. Miller^[65] and Shields^{[66][67]} also responded.

In addition, applied scholarship of public administration that assesses charter schools³⁹⁰,^[68] contracting out or outsourcing³⁹¹,^[69] financial management,^[70] performance measurement³⁹²,^[71] urban quality of life initiatives,^[72] and urban planning³⁹³^[73] in part draws on the ideas of classical pragmatism in the development of the conceptual framework³⁹⁴ and focus of analysis.^{[74][75][76]}

The health sector's administrators' use of pragmatism has been criticized as incomplete in its pragmatism, however,^[77] according to the classical pragmatists, knowledge is always shaped by human interests. The administrator's focus on "outcomes" simply advances their own interest, and this focus on outcomes often undermines their citizen's interests, which often are more concerned with process. On the other hand, David Brendel argues that pragmatism's ability to bridge dualisms, focus on practical problems, include multiple perspectives, incorporate participation from interested parties (patient, family, health team), and provisional nature makes it well suited to address problems in this area.^[78]

1.5.3 Effects on feminism

Since the mid 1990s, feminist philosophers have re-discovered classical pragmatism as a source of feminist theories. Works by Seigfried,^[79] Duran,^[80] Keith,^[81] and Whipps^[82] explore the historic and philosophic links between feminism and pragmatism. The connection between pragmatism and feminism took so long to be rediscovered because pragmatism itself was eclipsed by logical positivism during the middle decades of the twentieth century. As a result, it was lost from feminist discourse. Feminists now consider pragmatism's greatest strength to be the very features that led to its decline. These are "persistent and early criticisms of positivist interpretations of scientific methodology; disclosure of value dimension of factual claims"; viewing aesthetics as informing everyday experience; subordinating logical analysis to political, cultural, and social issues; linking the dominant discourses with domination; "realigning theory with praxis; and resisting the turn to epistemology and instead emphasizing concrete experience".^[83]

394 https://en.wikipedia.org/wiki/Conceptual_framework

Feminist philosophers point to Jane Addams³⁹⁵ as a founder of classical pragmatism. Mary Parker Follett³⁹⁶ was also an important feminist pragmatist concerned with organizational operation during the early decades of the 20th century.^{[84][85]} In addition, the ideas of Dewey, Mead, and James are consistent with many feminist tenets. Jane Addams, John Dewey, and George Herbert Mead developed their philosophies as all three became friends, influenced each other, and were engaged in the Hull House³⁹⁷ experience and women's rights³⁹⁸ causes.

1.6 Criticisms

In the 1908 essay "The Thirteen Pragmatisms", Arthur Oncken Lovejoy³⁹⁹ argued that there's significant ambiguity in the notion of the effects of the *truth* of a proposition and those of *belief* in a proposition in order to highlight that many pragmatists had failed to recognize that distinction.^[86] He identified 13 different philosophical positions that were each labeled pragmatism.

Franciscan⁴⁰⁰ monk Celestine Bittle presented multiple criticisms of pragmatism in his 1936 book *Reality and the Mind: Epistemology*.^[87] He argued that, in William James's pragmatism, truth is entirely subjective and is not the widely accepted definition of truth, which is correspondence to reality. For Bittle, defining truth as what is useful is a "perversion of language".^[87] With truth reduced essentially to what is good, it is no longer an object of the intellect. Therefore, the problem of knowledge posed by the intellect is not solved, but rather renamed. Renaming truth as a product of the will cannot help it solve the problems of the intellect, according to Bittle. Bittle cited what he saw as contradictions in pragmatism, such as using objective facts to prove that truth does not emerge from objective fact; this reveals that pragmatists do recognize truth as objective fact, and not, as they claim, what is useful. Bittle argued there are also some statements that cannot be judged on human welfare at all. Such statements (for example the assertion that "a car is passing") are matters of "truth and error" and do not affect human welfare.^[87]

British philosopher Bertrand Russell⁴⁰¹ devoted a chapter each to James and Dewey in his 1945 book *A History of Western Philosophy*⁴⁰²; Russell pointed out areas in which he agreed with them but also ridiculed James's views on truth and Dewey's views on inquiry.^{[88]:17[89]:120–124} Hilary Putnam later argued that Russell "presented a mere caricature" of James's views^{[88]:17} and a "misreading of James",^{[88]:20} while Tom Burke argued at length that Russell presented "a skewed characterization of Dewey's point of view".^{[89]:121} Elsewhere, in Russell's book *The Analysis of Mind*, Russell praised James's radical empiricism, to which Russell's own account of neutral monism⁴⁰³ was indebted.^{[88]:17[90]} Dewey, in *The Bertrand Russell*

*Case*⁴⁰⁴, defended Russell against an attempt to remove Russell from his chair at the College of the City of New York in 1940.^[91]

Neopragmatism⁴⁰⁵ as represented by Richard Rorty has been criticized as relativistic both by other neopragmatists such as Susan Haack⁴⁰⁶^[92] and by many analytic philosophers.^[93] Rorty's early analytic work, however, differs notably from his later work which some, including Rorty, consider to be closer to literary criticism⁴⁰⁷ than to philosophy, and which attracts the brunt of criticism from his detractors.

1.7.1 Classical (1850–1950)

Name	Life-time	Notes
Charles Sanders Peirce ⁴⁰⁸	1839–1914	was the founder of American pragmatism (later called by Peirce pragmatism ⁴⁰⁹). He wrote on a wide range of topics, from mathematical logic and semiotics to psychology. influential psychologist and theorist of religion as well as philosopher. First to be widely associated with the term "pragmatism" due to Peirce's lifelong unpopularity.
William James ⁴¹⁰	1842–1910	prominent philosopher of education ⁴¹² , referred to his brand of pragmatism as instrumentalism ⁴¹³ .
John Dewey ⁴¹¹	1859–1952	U.S. Supreme Court ⁴¹⁵ Associate Justice.
Oliver Wendell Holmes, Jr. ⁴¹⁴	1841–1935	one of the most important pragmatists of his time, Schiller is largely forgotten today.
F. C. S. Schiller ⁴¹⁶	1864–1937	

Protopragmatists or re-

Name	Life-time	Notes
George Herbert Mead ⁴¹⁷	1863–1931	philosopher and socio-logical social psychologist ⁴¹⁸ .
Josiah Royce ⁴¹⁹	1855–1916	colleague of James at Harvard who employed pragmatism in an idealist metaphysical framework, he was particularly interested in the philosophy of religion and community; his work is often associated with neo-Hegelianism ⁴²⁰ .
George Santayana ⁴²¹	1863–1952	although he eschewed the label "pragmatism" and called it a "heresy", several critics argue that he applied pragmatist methodologies to naturalism ⁴²² , especially in his early masterwork, <i>The Life of Reason</i> ⁴²³ .
W. E. B. Du Bois ⁴²⁴	1868–1963	student of James at Harvard who applied pragmatist principles to his sociological work, especially in <i>The Philadelphia Negro</i> ⁴²⁵ and <i>Atlanta University Studies</i> .

lated thinkers

Other

1.7.2 Analytic, neo- and other (1950–present)

Name	Life-time	Notes
Richard J. Bernstein ⁴³¹	1932–	Author of <i>Beyond Objectivism and Relativism: Science, Hermeneutics, and Praxis</i> , <i>The New Constellation: The Ethical-Political Horizons of Modernity/Postmodernity</i> , <i>The Pragmatic Turn</i>
F. Thomas Burke	1950–	Author of <i>What Pragmatism Was</i> (2013), <i>Dewey's New Logic</i> (1994). His work interprets contemporary philosophy of mind, philosophy of language, and philosophical logic through the lens of classical American pragmatism.
Arthur Fine ⁴³²	1937–	Philosopher of Science who proposed the Natural Ontological Attitude ⁴³³ to the debate of scientific realism ⁴³⁴ .
Stanley Fish ⁴³⁵	1938–	Literary and Legal Studies pragmatist. Criticizes Rorty's and Posner's legal theories as "almost pragmatism" ^[94] and authored the afterword in the collection <i>The Revival of Pragmatism</i> . ^[95]
Robert Brandom ⁴³⁶	1950–	A student of Rorty, has developed a complex analytic version of pragmatism in works such as <i>Making It Explicit</i> , <i>Between Saying and Doing</i> , and <i>Perspectives on Pragmatism</i> .
Clarence Irving Lewis ⁴³⁷	1883–1964	a leading authority on symbolic logic and on the philosophic concepts of knowledge and value.
Joseph Margolis ⁴³⁸	1924–2021	still proudly defends the original Pragmatists and sees his recent work on Cultural Realism as extending and deepening their insights, especially the contribution of Peirce ⁴³⁹ and Dewey, in the context of a rapprochement with Continental philosophy.
Hilary Putnam ⁴⁴⁰	1926–2016	in many ways the opposite of Rorty and thinks

- I have always fathered my pragmatism (as I have called it since James and Schiller made the word [pragmatism] imply "the will to believe," the mutability of truth, the soundness of Zeno's refutation of motion, and pluralism generally), upon Kant, Berkeley, and Leibniz. ...
13. Peirce, C.S. (1908) "A Neglected Argument for the Reality of God⁴⁹⁹", *Hibbert Journal* 7, reprinted in *Collected Papers* v. 6, paragraphs 452–85, *Essential Peirce* v. 2, 434–450, and elsewhere. After discussing James, Peirce stated (Section V, fourth paragraph) as the specific occasion of his coinage "pragmatism", journalist, pragmatist, and literary author Giovanni Papini⁵⁰⁰'s declaration of pragmatism's indefinability (see for example "What Is Pragmatism Like", a translation published in October 1907 in *Popular Science Monthly* v. 71, pp. 351–358, Google Books Eprint⁵⁰¹). Peirce in his closing paragraph wrote that "willing not to exert the will (willing to believe)" should not be confused with "active willing (willing to control thought, to doubt, and to weigh reasons)", and discussed his dismay by that which he called the other pragmatists' "angry hatred of strict logic". He also rejected their nominalist⁵⁰² tendencies. But he remained allied with them about the falsity of necessitarianism and about the reality of generals and habits understood in terms of potential concrete effects even if unactualized.

 18. Peirce held that (philosophical) logic is a normative⁵¹² field, that pragmatism is a method developed in it, and that philosophy, though not deductive or so general as mathematics, still concerns positive phenomena in general, including phenomena of matter and mind, without depending on special experiences or experiments such

This **further reading**⁶²¹ section may contain inappropriate or excessive suggestions that may not follow Wikipedia's guidelines⁶²². Please ensure that only a reasonable number⁶²³ of balanced⁶²⁴, topical⁶²⁵, reliable⁶²⁶, and notable further reading suggestions are given; removing less relevant or redundant publications with the same point of view⁶²⁷ where appropriate. Consider utilising appropriate texts as inline sources⁶²⁸ or creating a separate bibliography article⁶²⁹. (*December 2015*)(*Learn how and when to remove this template message*⁶³⁰)

Surveys

- John J. Stuhr, ed. *One Hundred Years of Pragmatism: William James's Revolutionary Philosophy* (Indiana University Press; 2010) 215 pages; Essays on pragmatism and American culture, pragmatism as a way of thinking and settling disputes, pragmatism as a theory of truth, and pragmatism as a mood, attitude, or temperament.

Important introductory primary texts

Note that this is an introductory list: some important works are left out and some less monumental works that are excellent introductions are included.

- C.S. Peirce, "The Fixation of Belief"⁶³¹ (paper)
- C.S. Peirce, "How to Make Our Ideas Clear"⁶³² (paper)
- C.S. Peirce, "A Definition of Pragmatism" (paper as titled by Menand in *Pragmatism: A Reader*, from *Collected Papers of Charles Sanders Peirce* v. 8, some or all of paragraphs 191–195.)
- William James, *Pragmatism: A New Name for Some Old Ways of Thinking*⁶³³ (especially lectures I, II and VI)
- John Dewey, *Reconstruction in Philosophy*⁶³⁴
- John Dewey, "Three Independent factors in Morals" (lecture published as paper)
- John Dewey, "A short catechism concerning truth"⁶³⁵ (chapter)
- W.V.O. Quine, "*Two Dogmas of Empiricism*"⁶³⁶. (paper)

Secondary texts

- Cornelis De Waal, *On Pragmatism*

3 Licenses

3.1 GNU GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program—to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow. TERMS AND CONDITIONS 0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or using a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion. 1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major operational component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work. 2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary. 3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures. 4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee. 5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

* a) The work must carry prominent notices stating that you modified it, and giving a relevant date. * b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices". * c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it. * d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate. 6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

* a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange. * b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge. * c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b. * d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a

different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements. * e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects to be expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying. 7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

* a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or * b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or * c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or * d) Limiting the use for publicity purposes of names of licensors or authors of the material; or * e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or * f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way. 8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates

your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10. 9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so. 10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it. 11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law. 12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy

both those terms and this License would be to refrain entirely from conveying the Program. 13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such. 14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

3.2 GNU Free Documentation License

Version 1.3, 3 November 2008

Copyright (c) 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. 0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference. 1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

The "publisher" means any person or entity that distributes copies of the Document to the public.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version. 15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION. 16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. 17. Interpretation of Sections 15 and 16.

following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History"). To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties; any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License. 2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies. 3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first one listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document. 4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of section 2 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, this licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

* A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission. * B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement. * C. State on the Title page the name of the publisher of the Modified Version, as the publisher. * D. Preserve all the copyright notices of the Document. * E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices. * F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown below. * G. Preserve in the license notice the full list of Invariant Sections and required Cover Texts given in the Document's license notice. * H. Include an unaltered copy of this License. * I. Preserve the section entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous section. * J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission. * K. For a section entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein. * L. Preserve all the Invariant Sections of the Document, unaltered in their text and

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

in their titles. Section numbers or the equivalent are not considered part of the section titles. * M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version. * N. Do not retile any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section. * O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or of the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version. 5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements". 6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document. 7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate. 8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title

You should have received a copy of the GNU General Public License along with this program. If not, see <<http://www.gnu.org/licenses/>>.

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

<program> Copyright (C) <year> <name of author> This program comes with ABSOLUTELY NO WARRANTY; for details type 'show w'. This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see <<http://www.gnu.org/licenses/>>.

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read <<http://www.gnu.org/philosophy/why-not-lgpl.html>>.

(section 1) will typically require changing the actual title. 9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it. 10. ALL FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <<http://www.gnu.org/copyleft/>>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Document. 11. RELICENSING

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public webkit that anybody can edit is an example of such a server. A "Massive Multiauthor Collaboration" (or "MMC") contained in the site means any set of copyrightable works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

"Incorporate" means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing. ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (C) YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the License is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with ... Texts." line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.

3.3 GNU Lesser General Public License

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates the terms and conditions of version 3 of the GNU General Public License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, “this License” refers to version 3 of the GNU Lesser General Public License, and the “GNU GPL” refers to version 3 of the GNU General Public License.

“The Library” refers to a covered work governed by this License, other than an Application or a Combined Work as defined below.

An “Application” is any work that makes use of an interface provided by the Library, but which is not otherwise based on the Library. Defining a subclass of a class defined by the Library is deemed a mode of using an interface provided by the Library.

A “Combined Work” is a work produced by combining or linking an Application with the Library. The particular version of the Library with which the Combined Work was made is also called the “Linked Version”.

The “Minimal Corresponding Source” for a Combined Work means the Corresponding Source for the Combined Work, excluding any source code for portions of the Combined Work that, considered in isolation, are based on the Application, and not on the Linked Version.

The “Corresponding Application Code” for a Combined Work means the object code and/or source code for the Application, including any data and utility programs needed for reproducing the Combined Work from the Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

* a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or

* b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

* a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.

* b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

* a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are covered by this License.

* b) Accompany the Combined Work with a copy of the GNU GPL and this license document.

* c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document.

* d) Do one of the following:

- o 0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.
- o 1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user’s computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.
- * e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

* a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License.

* b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License “or any later version” applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy’s public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.
